

## U-[<sup>13</sup>C<sub>24</sub>] – T-2 TOXIN IN ACETONITRILE

### 1. General information

This document is designed and the certified value(s) and uncertainty(ies) are determined in accordance with ISO Guide 31 [1] and Eurachem / CITAC Guides [2,3].

### 2. Description of the Reference Material (RM)

Name:	U-[ <sup>13</sup> C <sub>24</sub> ] – T-2 Toxin in acetonitrile
CAS number:	21259-20-1 (unlabeled)
Catalog number:	DRE-A13989100AL-25
Lot #:	I18341C
Certificate version:	2
Expiry date:	18.08.2020
Starting material:	U-[ <sup>13</sup> C <sub>24</sub> ] - T-2 Toxin, Lot # IS13202T Romer Labs Diagnostic GmbH
Physical description of RM:	Solution of U-[ <sup>13</sup> C <sub>24</sub> ] – T-2 Toxin in acetonitrile
Packaging and amount of RM:	Amber glass ampoules fitted with teflon faced butyl septa and aluminium crimp cap, solution of 1.2 mL
Name and address of the manufacturer:	Romer Labs Diagnostic GmbH Technopark 5, 3430 Tulln, Austria www.romerlabs.com
Name and address of the supplier:	LGC Standards GmbH Mercatorstraße 51, 46485 Wesel, Germany Tel +49(0)2 81 98 87 0, Fax +49(0)2 81/98 87 199 www.lgcstandards.com

#### 2.1 Intended use of the RM

- for laboratory use only
- internal standard [4, 5]

#### 2.2 Instruction for the correct use of the RM

The ampoules should be stored at 2-8°C or below in a dark place. Before usage of the RM, the ampoules should be allowed to warm to room temperature. The recommended minimum sub-sample amount for all kinds of application is 100 µL. The expiry date of this RM is based on the current knowledge and holds only for proper storage conditions in the originally closed flasks/packages.

#### 2.3 Hazardous situation

The normal laboratory safety precautions should be observed when working with this RM. Further details for the handling of this RM are available as safety data sheet (SDS).

Hazardous Ingredients	Concentration in %	Pictograms	Signal word	Hazard statement(s)
Acetonitrile	> 99.9		Danger	H225, H302, H312, H319, H332

## REFERENCE MATERIAL CERTIFICATE

### 3. Certified values and their uncertainties

U-[ <sup>13</sup> C <sub>24</sub> ] - T-2 Toxin in acetonitrile		
Compound	Mass concentration <sup>a</sup>	
	Certified value <sup>b</sup>	Uncertainty <sup>c</sup>
U-[ <sup>13</sup> C <sub>24</sub> ] - T-2 Toxin, 99.1 atom % <sup>13</sup> C	25.1 µg/mL	± 0.2 µg/mL
<sup>a</sup> Values are based on preparation data and confirmed experimentally by HPLC-UV <sup>b</sup> Mass concentration based on weighed amount, purity and dilution step <sup>c</sup> Expanded uncertainty U (k = 2) of the value u <sub>c</sub> according to GUM [6]		

#### 3.1 Calculation of uncertainty

The uncertainty of the calibrant solution was calculated on the basis of preparation [7].

Uncertainty components	Description	Standard uncertainty (u)	
Purity (P) of solid U-[ <sup>13</sup> C <sub>24</sub> ]-T-2 Toxin, 99.1 atom % <sup>13</sup> C	P = 99.5 ± 0.5 %	<b>u (P) = 0.3 %</b>	a
Weighing procedure weighted sample: m <sub>ws</sub> = 12.612 mg	U(m) = 0.0000008g + 1.26 * 10 <sup>-5</sup> * m <sub>Toxin</sub> u(m) = U(m)/2	<b>u (m) = 0.0005 mg</b>	b
Dilution procedure volumetric flask: V <sub>f</sub> = 500 mL	calibration: 500 mL ± 0.25 mL repeatability: 0.1 mL volume expansion solvent	u (cal) = 0.1 mL u (rep) = 0.1 mL u (Vol. exp.) = 1.19 mL <b>u (V) = 1.2 mL</b>	c d e f

<sup>a</sup> Maximum tolerance of purity (rectangular distribution) was divided by  $\sqrt{3}$

<sup>b</sup> Calculation of this u-value is based upon the uncertainty formula for the weighed amount as given in the calibration report from annual balance calibration

<sup>c</sup> A triangular distribution (division by  $\sqrt{6}$ ) was chosen for the calculation of u (cal)

<sup>d</sup> Based on a series of ten fill and weigh experiments on a typical 500 mL flask; the value was used directly as a standard deviation

<sup>e</sup> Based on the density of 0.7857 g/cm<sup>3</sup> at temperature T = 20°C and a maximum temperature variation of ± 3°C, of volume expansion, relative volume expansion coefficient of acetonitrile is 1370 \* 10<sup>-6</sup>/°C [8], volume expansion term (rectangular distribution) was divided by  $\sqrt{3}$

<sup>f</sup> The three contributions are combined to give the u (V) =  $\sqrt{u(cal)^2 + u(rep)^2 + u(Vol.exp.)^2}$

#### Calculation of the combined uncertainty u<sub>c</sub> and the expanded standard uncertainty U

$$c_{Toxin} = \frac{10 \times m_{ws} \times P}{V_f} = \frac{10 \times 12.612 \times 99.5}{500} = 25.1 \text{ mg/L}$$

$$\frac{u_c(c_{Toxin})}{c_{Toxin}} = \sqrt{\left[\frac{u(P)}{P}\right]^2 + \left[\frac{u(m)}{m_{ws}}\right]^2 + \left[\frac{u(V)}{V_f}\right]^2} = \sqrt{\left[\frac{0.3}{99.5}\right]^2 + \left[\frac{0.0005}{12.612}\right]^2 + \left[\frac{1.2}{500}\right]^2} = 0.004$$

$$u_c(c_{Toxin}) = c_{Toxin} \times 0.004 = 25.1 \times 0.004 = 0.10 \text{ mg/L}$$

Calculation of expanded standard uncertainty U using a coverage factor k = 2

$$U(c_{Toxin}) = u_c(c_{Toxin}) \times 2 = 0.10 \times 2 = 0.20 \text{ mg/L} = 0.2 \text{ µg/mL}$$

REFERENCE MATERIAL CERTIFICATE

4. Isotopic enrichment and isotope pattern

Isotope pattern <sup>a</sup>	
Compound	Isotopic distribution
[ <sup>13</sup> C <sub>24</sub> ] - T-2 Toxin	82.2 %
[ <sup>13</sup> C <sub>23</sub> ] - T-2 Toxin	15.0 %
[ <sup>13</sup> C <sub>22</sub> ] - T-2 Toxin	2.8 %

  

Calculated isotopic enrichment level <sup>a</sup> : 99.1 atom % <sup>13</sup> C
<sup>a</sup> Approximation based on LC-MS/MS data

  

Figure 1: Enhanced resolution scan (250 amu/s) of U-[<sup>13</sup>C<sub>24</sub>]-T-2 Toxin for determination of isotope pattern

5. Discussion of traceability

This calibrant is certified on the basis of gravimetric preparation [7]. Thus the certified value (mass concentration of U-[<sup>13</sup>C<sub>24</sub>]-T-2 Toxin, 99.1 atom % <sup>13</sup>C) is based on the weighed amount of the starting material and is therefore traceable to the stated purity of the solid raw material. High purity material represents a practical realization of concentration units, through conversion of mass to molar quantity.

6. Confirmation of certified value by HPLC-UV

The certified concentration of U-[<sup>13</sup>C<sub>24</sub>]-T-2 Toxin of the gravimetric prepared solution was confirmed by HPLC-UV against an independently prepared reference batch of unlabeled T-2 Toxin.

column	Phenomenex Luna C18(2), 75 x 4.6 mm, 3μ	
injection volume	100 μL sample	
solvent A	acetonitrile / water (10 / 90)	
solvent B	acetonitrile	
flow	1 mL / min	
gradient	time in minutes (min)	% solvent B
	0 – 0.5	11
	0.5 – 6.5	11 - 50
	6.5 – 9.5	50
	9.5 – 9.6	50 - 11
	9.6 – 13	11
DAD settings	λ = 191 nm	
sample dilution	1:5 with water
